EDUCATION

BACHELOR'S DEGREE IN COMPUTER SCIENCE

UFSCar - Universidade Federal de São Carlos

2016 - 2023

PROFILE

Experienced backend developer with over 5 years of expertise in Python development and a bachelor's degree in computer science. A proactive communicator adept at collaborating with teams to achieve objectives. I assist companies in building remarkable projects. I am passionate about transforming abstract ideas into functional code.

EXPERIENCE

BACKEND DEVELOPER

Nava Software Solutions | 2023 - Today

Utilizing my Python expertise and proactive approach, I specialize in implementing high-quality, marketable financial products. The solutions I develop facilitated financial movements exceeding 40M in March 2024, contributing significantly to the company's success with a revenue of over 398K.

AUTOMATION DEVELOPER

Serasa Experian | 2020 - 2023

I orchestrated the design and development of automation solutions for global clients within a financial data technology company. By implementing these automations, I established virtual workforces, effectively minimizing hiring costs and enhancing the productivity of existing staff members. Over the duration of my involvement, these solutions resulted in annual savings exceeding 2M dolars.

FULL STACK DEVELOPER

Ringa | 2019 - 2020

During my time at this growing software house startup, I meticulously developed a customized system tailored to a specific client's needs. This comprehensive system included an API for seamless communication with mobile apps and a user-friendly admin interface for content management across platforms. Over a period of six months, I diligently worked on this project, culminating in the successful delivery of a complex B2B solution. Notably, this project was sold for 30K dólars (this was my first project and I did all by my self).
